

NU-CORE® Anodised Effect

Where Architects and Designers are looking for a high quality appearance, the satin smooth finish of Nu-core® Anodised effect material is ideal.

Ideal for all façade and wall cladding, roof fascia detailing, columns and curved sections, for both interior and exterior applications.

The added advantage is it's compatibility with anodised windows and door sections, whilst it can be easily shaped and curved, with unlimited possibilities, where conventional anodised cladding materials are limited.

Nu-core® Anodised effect is applied on a continuous coil coating process (pvd), providing for true consistency and uncompromised quality.

For consistency of a Nu-core® Anodised effect on a building elevation, it is recommended that materials are taken from the same production batch. And should always be installed in the same direction, which is clearly indicated on the protection film with arrows.

Please contact your local Nu-core® distributor for more information or visit us at www.nu-core.com.au
